

## Press Release: Digital Mass Flow Controller for High-Volume OEM

The Swiss company Sensirion (Zurich/Switzerland), first choice supplier for leading LC flow sensing solutions is now introducing a GC OEM flow control solution based on the same CMOSens<sup>®</sup> Technology.

The new *Whitney* product line of fully digital CMOSens<sup>®</sup> Mass Flow Controllers and Mass Flow Meters features very high flexibility, best stability and repeatability at the market over a large dynamic range (e.g. >1:1500 control range for Helium). Different gas types and control ranges from 0.5ml/min to 1500ml/min can be switched by software, even during operation. Sophisticated temperature compensation, zero drift, and standard digital RS485 interface offer easy and inexpensive installation in high-volume OEM applications.

The new *Whitney* product line for high-volume applications offers digital performance at highly attractive 'analog' prices, which makes it immediately first choice for GC flow sensing solutions.
